

R Workshop Day 1

Warmup

- Introductions
- What is your main goal for this workshop?
- What type of data analysis are you most interested in?

RStudio basics

- What are R and RStudio?¹
- Why might one use RStudio over something like Excel or SPSS?²
- Logging in to the RStudio server.³
- Type `library(hanoverbase)` in the “console” window and press Enter. We will talk about what this does later.
- The different sections and panes in RStudio.⁴
- Using the console, including help and history⁵
- Basic arithmetic and use of scientific notation in RStudio.⁶
- Assigning to variables.⁷
- Working with vectors/sequences.⁸
- Quickly entering some data using `scan()`.⁹
- Basic statistics for a vector¹⁰
- Basic graphs for a vector¹¹

Analyzing some data

- Loading data from Excel.
- Loading data from CSV.
- Loading built-in datasets with `data()`.
