

# Hanover Stats Labs

This site is a repository of information related to statistics instruction at Hanover College. Here you will find resources regarding the use of R and R-Studio, as well as details about our lab assignments.

- Our labs<sup>1</sup> are a great place to start. They gradually introduce you to the various features of R and R-Studio.
- Summary of the commands<sup>2</sup> we use can be found here. Use it as a reference for enhancing the command's output if the default behavior is not quite what you wanted. We have purposefully restricted ourselves to a small subset of the R language, based on the work of Project MOSAIC<sup>3</sup>.
- Various resources<sup>4</sup> with further links.
- Login instructions<sup>5</sup> for those that do not need to follow our labs above. This page has brief information on how to log in to the Hanover College RStudio server.
- Self-installation instructions TODO
