

# Workshop-related resources

## Links to notes for our summer workshops

- Getting ready to work<sup>1</sup>
- Day 1 workshop<sup>2</sup>

## Books

While there are a large number of resources available for R, the following form a core start point:

1. R for Data Science<sup>3</sup> is available online and can also be purchased from various sellers. It is a solid introduction to using the tidyverse set of packages and working with R in general.
2. ggplot2: Elegant Graphics for Data Analysis<sup>4</sup> is an excellent in-depth look at the ggplot2 package and its capabilities.
3. Linear Models with R<sup>5</sup> discusses linear modeling with a more practical viewpoint and using a lot of R code in the process.
4. Extending the Linear Model with R: Generalized Linear, Mixed Effects and Nonparametric Regression Models<sup>6</sup> discusses more advanced modeling, including topics like Logistic Regression, Random Effects and Repeated Measures.
5. An Introduction to Statistical Learning: with Applications in R<sup>7</sup> is a great broad introduction to various topics related to statistical learning.

## Cheatsheets

- Various RStudio-provided cheatsheets<sup>8</sup>. Most other links are from that site.
- Data Import<sup>9</sup> with the readr package and its friends.
- Graphing<sup>10</sup> with ggplot2.
- Data Transformations<sup>11</sup> with dplyr. There is also an older version<sup>12</sup> that is slightly different.
- The stringr<sup>13</sup> package for string manipulations.
- The purrr<sup>14</sup> package for working with lists of items in a consistent way.
